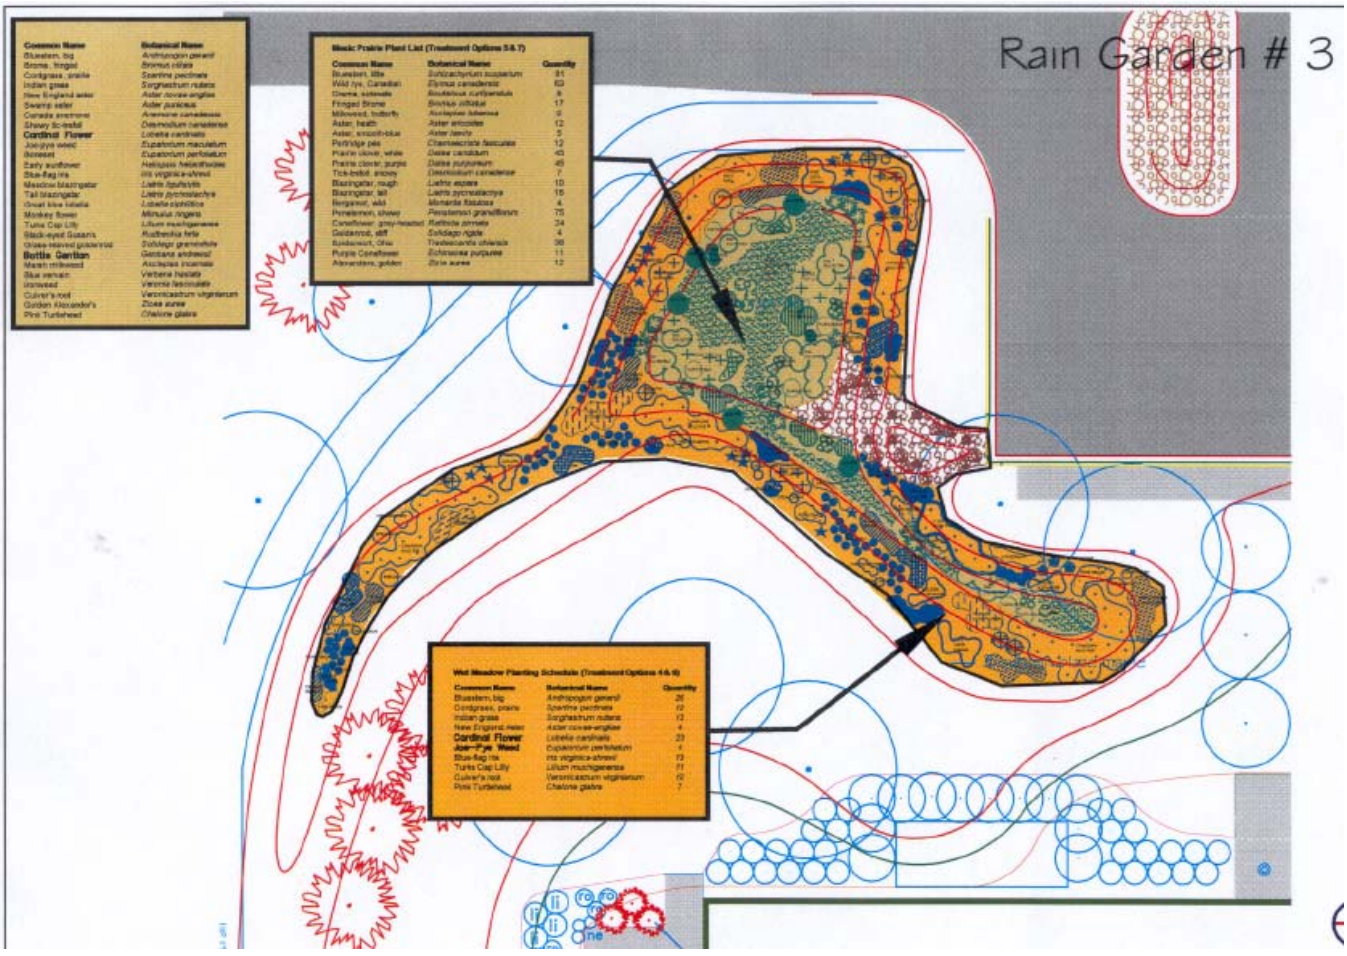
Hugo City Hall Rain Gardens
Hugo, MN

Ingraham & Associates worked with Emmons & Oliver Resources to design rain gardens for the Hugo City Hall. The rain gardens were designed to collect and treat storm water from the new parking lot and building and to demonstrate sustainable site development.


There were three main garden areas, one with a small fountain and bridge crossing. The plantings are all native to Minnesota and were chosen to survive frequent flood events. The project is a demonstration of creative and attractive storm water management.
