

# Shoreview Community Center Landscape Plan Shoreview, MN

Inghram and Associates was asked by the Shoreview Parks and Recreation Department to provide them with front entry design alternatives for their highly used community center.

The preferred alternative utilizes a colored concrete surface to match the surface of the new addition to the south of the building. The plant materials picked also match the plants near the new addition. New benches, trash receptacles, and appropriate shade tree plantings were also incorporated into the front entry area. Also linking to the water theme is the curvilinear band of river rock pavement along the front of the building.

The community center houses many recreation activities including a large indoor water park. The water wall proposed for the front entry area would act as an interactive feature to draw visitors to the entry as well as create a relationship with the water park inside.
